the Tribe will focus on environmental restoration and projects with Olympic National Park will primarily consist of trail construction and improvement.

October 6th

This is a new crew with Pierce Conservation District. They will be dedicated to habitat restoration. Pierce Conservation District will be the primary sponsor, but 5 other partner organizations will provide project work.

This crew works with the Washington State Department of Natural Resources (DNR) on urban forestry projects. This project involves collaborating with municipal governments in the Puget Sound Basin to conduct urban forest restoration projects on public land (parks, rights-of-way, open space, watersheds, etc.). These projects include invasive species removal, tree planting, young tree pruning, inventories, and other restoration work.

October 6th

This crew works on projects with the Washington State Department of Natural Resources (DNR). Projects focus on restoration of degraded and eroding recreational trails. This includes undesignated (user built) sites as well as designated trails that are contributing to sedimentation and water quality issues that need

to be moved or rebuilt.

The goal of the City of Bellingham crews is to improve the habitat of traditional salmon runs that have suffered from increasing urbanization. Our crew primarily accomplishes this by prepping and planting project sites in the fall and winter and then removing invasive species from the project sites in spring and summer. There are also many small projects completed throughout the year. These other projects include installation of large woody debris, fence construction, culvert removal, bank stabilization, erosion control, excavator operations, debris removal, mulch spreading, smolt trap installation and monitoring, various construction projects, and more. There are also opportunities to help with environmental education and to participate in biological surveys of amphibians, birds, spawning salmon and vegetation.

October 6th

This crew is a habitat restoration crew sponsored by Pierce County Surface Water Management (SWM). We meet at Central Maintenance Facility in Frederickson. This is a shared facility with other pierce county employees. We plant natives in the winter months, October- March. This involves carrying plants in slippery, rainy conditions and a heavy amount of squatting. During the spring and

summer months we focus on weed removal, which includes blackberry grubbing, scotch broom removal, etc. We use power tools such as brush cutters and chainsaws. From July-September, our main focus is knotweed removal. This means we will carry 3 gallon spray packs over uneven terrain for several hours at a time. Anyone interested in the position must be willing to apply herbicide. It is a requirement. Find out what past crew members have done by checking out ourcrew blog.

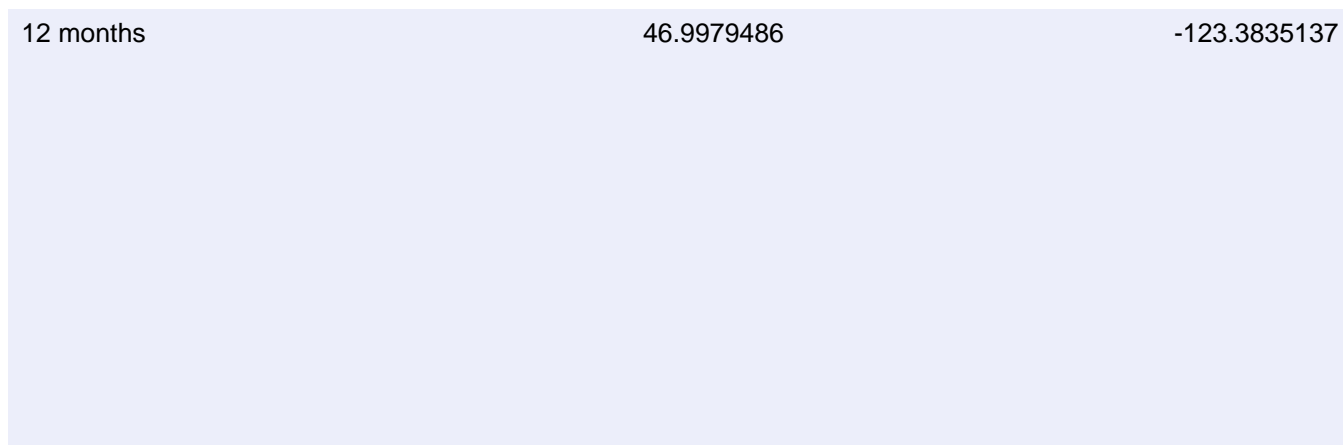

This is a new crew with City of Olympia Environmental Services. Projects will consist of environmental restoration - primarily removing invasive species and planting native trees and shrubs. Community outreach, vegetation surveys, and and trail/boardwalk construction will also be a part of this crew's responsibilities.

October 6th

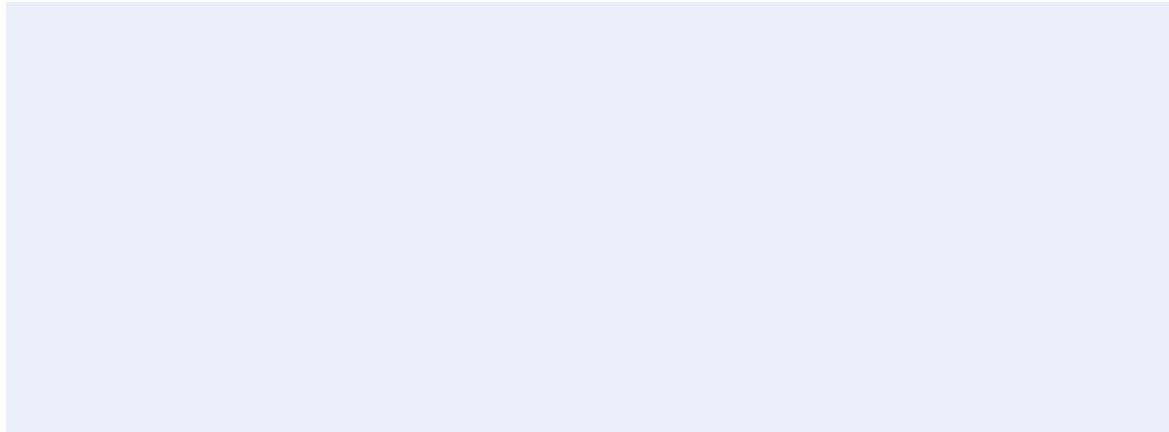

Would you like to work in the Old Growth Forest on the Olympic Peninsula? This crew completes many projects in this unique ecosystem. In winter, we work in hatcheries, spawning salmon. We use these fish for nutrient enhancement projects in the upper watershed. In fall, we perform campground construction or improvement. Other projects involve in-stream work, which helps to create and maintain fish habitat. Planting season comes in the spring-we spend extensive time on restoration

east of I-405 up to the Cascade foothills and in areas from Duvall down to Enumclaw. The crews work on county-owned property as well as on land with which the county has a conservation easement with the private land-owner. A majority of the time is spent on riparian habitat restoration -- removing invasive species and planting native trees and shrubs along creeks, streams, and rivers. There are some sites that also involve erosion prevention, installation of irrigation systems, fence building, in-stream habitat creation, and a variety of other tasks. Projects vary from 1 to 2 days in length (usually during the summer maintenance season) up to a couple of months on large planting projects (usually during the winter). There is a wide range in the type of work these crews do and the techniques they utilize, many of which are cutting-edge restoration concepts.

The crews meet daily at a compound in Renton, located near Renton Technical College and work 4 ten hours day, Monday-Thursday 7:00 a.m. - 5:30 p.m. Most crew members live in Seattle proper and carpool with one another to work, though the compound is also accessible by the Metro bus system. With 4 crews, there are ample opportunities to do intra-King County crew swaps

Serving on a spike crew means frequently being out of town. Hotels, tents, or bunkhouses are just some of the places we call home. Lodging and food are provided while traveling. The schedule varies – sometimes, it will be a normal four-day week (ten hour days) or an eight-day week, Thursday to Thursday, with six days off. Persons applying for this position must be flexible and willing to adjust to this. Projects include riparian planting along salmon inhabited rivers, invasive plant removal. Crewmembers often sport rubber boots, planting sedge plugs for wetland restoration or placing large woody debris in a stream channel. These crews may deploy at any time for a disaster. The duration of these deployments varies from 14-30 days.

October 6th

The Skagit Fisheries Enhancement Group crew works for a wide variety of sponsors throughout Northwest Washington. This crew is occasionally gone for the workweek on “spikes”. These last either four or eight days at a time and the crew typically camps at or near the work site. This crew may also deploy on disasters with little notice. Members must be flexible. Herbicide is often required to treat invasive weeds and all crew

placement, fish handling, and data collection.

For the DNR, we work in designated “Natural Areas” doing trail maintenance and construction, beach cleanup, and habitat restoration projects. Redmond crew members are expected to work hard and be on time, build up their crew mates, and create future opportunities for themselves during the program. This crew uses hand and power tools and may go on spike trips throughout the year.

This crew is based in Port Hadlock, working for the North Olympic Salmon Coalition (NOSC). NOSC is one of 14 Regional Fisheries Enhancement Groups (RFEGs) in the state of Washington. The crew implements projects for NOSC and partnering organizations, such as conservation districts, other RFEGs, Tribes, land trusts and WDFW. Projects primarily consist of riparian/estuarine restoration which involves; native plantings, noxious weed control and site maintenance (includes brush cutting, mowing, and herbicide application). Corps members will be expected to test for a Washington State Pesticide Applicator License. The crew will occasionally assist with salmonid and habitat monitoring. The work week is generally Monday-Thursday,

expect to gain proficiency in a variety of power tools, from chainsaws to brushcutters. Routine project activities require working in extreme temperatures during winter months and extreme temperatures during summer months. Camping, over night and/or weekly travel is required as well as travel out of state for up to 30 days at a time on disaster response missions. Previous outdoor work experience is highly recommended although not required to qualify for a crew position.

The Seattle crew works with Forterra, a local non-profit with a progressive agenda to ensure the long-term sustainability and livability of the Puget Sound Region and the Northwest. Most of our work is as an integral part of the Green Seattle Partnership (GSP), a collaboration between Forterra and the City of Seattle to restore all 2500 acres of Seattle's wooded parklands by 2025. Our role is to combat the problem of invasive species and foster the growth of native plants and habitats, thus creating a greener, more enjoyable emerald city for all.

Our goals are ambitious and our work is necessary and rewarding, but it is also often tedious and dirty. The focus is on quality as well

as quantity as we work side by side removing common enemies such as English Ivy and Himalayan Blackberry, larger species like Laurel and Holly or smaller suspects like Herb Robert or Garlic Mustard. We use our hands and hand tools most to clear each weed we come across, getting to the root of the problem, literally. This often requires being on all fours as we make our way inch by inch through the forest, though we also use weed wrenches, brush-cutters, chainsaws and herbicide when called for. We often work on steep hillsides in slick conditions and thus install erosion control measures following our initial removal. We then plant, mulch and sometimes water these reclaimed areas. Then, of course, they must be maintained to keep the invaders at bay. Also, summer work includes injecting or spraying Knotweed on the Cedar River, a particularly vigorous invasive species along our NW rivers. These are our main types of projects, but other possible opportunities include trail work, nursery work, site planning, disaster response, back-country spikes and others. We will also lead occasional weekend volunteer events, so some flexibility with scheduling is needed and enthusiasm for working with the public is a big plus.

The crew conveniently meets in the University District of Seattle, which is accessible by many bus routes, and works four 10-hour shifts a week. This crew works closely together every day and we will get to know each other well, so bring your skills, desire to learn, and your excitement for a great year!

October 6th

The City of Tacoma Crew spends a majority of the time on near shore habitat restoration and maintenance of existing restoration sites. These activities include removing invasive, planting native species, and site maintenance, which will include the use of herbicides. Less often, the crew plants and maintains street trees with the city's urban forestry program in order to capture and manage storm water. The crew meets off Highway 16 near the Tacoma transfer station and works within Tacoma. To see a great example of the work that the crew completes, take a trip up 56th street.

This crew works with the Washington State Department of Natural Resources (DNR) on urban forestry projects. This project involves

collaborating with municipal governments in the Puget Sound Basin to conduct urban forest restoration projects on public land (parks, rights-of-way, open space, watersheds, etc.). These projects include invasive species removal, tree planting, young tree pruning, inventories, and other restoration work.

This crew, based in Ellensburg, completes work throughout Eastern Washington. Work is primarily Habitat Assessment Surveys, riparian restoration, fencing, and site maintenance but could include other natural resource work and disaster relief. Regular work week is Monday-Thursday, 10 hours per day. Some overnight travel may be required.

October 6th

This crew is one of four Disaster Response Crews in the State. As a primary disaster response crew we are deployed anywhere in the United States when we receive a mission assignment. Disaster Response is a very challenging yet rewarding experience. This crew is also a primary Wildland Firefighting Crew for the DNR. Special requirements for this crew are: Obtaining a Wildland firefighting red card, FEMA NIMS IS 100 and 700 and the ability to leave home for up to 30 days. The Skagit DNR Disaster Response Crew has been deployed to several disasters over the

There are three WCC crews that work on projects with the Washington State Department of Natural Resources in Skagit, Whatcom, Snohomish, and San Juan Counties. Currently, these crews primarily focus their efforts on constructing and maintaining trails in several different landscapes. Work areas include Blanchard Mountain, Cypress Island, Harry Osborne Horse Trails, Morning Star Natural Area, and the Walker Valley ORV Park. This crew may also have the opportunity to work on restoration efforts in the San Juan Islands. The variable work makes for a great learning experience. The schedule may also vary between 4 and 8 day spikes, in which members must be willing to be away from home, in travel status, during this time. Otherwise, the crew meets daily at the DNR office in Sedro Woolley.

October 6th

There are four crews (20 crew members total) working for King County's Department of Natural Resources and Parks. These crews work primarily in rural, unincorporated King County;

The Spokane WCC crew spends its time in very remote areas of Eastern Washington encompassing 13 counties within the boundaries of Idaho, Oregon and Canada building exclusionary fencing to keep livestock out of surface waters not meeting minimum water quality standards set forth by the State of Washington. Also, while performing this work, expect to gain proficiency in a variety of power tools, from chainsaws to brushcutters. Routine project activities require working in extreme temperatures during winter months and extreme temperatures during summer months. Camping, over night and/or weekly travel is required as well as travel out of state for up to 30 days at a time on disaster response missions. Previous outdoor work experience is highly recommended although not required to qualify for a crew position.

The Wenatchee crew is primarily a traveling or 'spike' crew. During the fall and spring months, they focus their efforts on restoration projects in the Chelan County area and the winter and summer months are spent on projects throughout the state. Examples of this work include invasive weed removal, exclusionary fencing, planting, trail building and maintenance, and monitoring programs. This work is done in areas as far spread as Yakima, Lake Chelan, or Olympia. The travel schedule can vary from four 10-hour days to eight 10-hour days proceeded by six days off. The crew meets in the northwestern section of Wenatchee and is easily accessible by highway 2.

In addition to our natural resource projects, this crew often responds to floods, hurricanes, tornados, oil spills, and wildland fires in and out of the state of Washington. As a crewmember you can expect diversity of work and to travel throughout the year.

October 6th

There are four crews (20 crew members total) working for King County's Department of Natural Resources and Parks. These crews work primarily in rural, unincorporated King County;

Serving on a spike crew means frequently being out of town. Hotels, tents, or bunkhouses are just some of the places we call home. Lodging and food are provided while traveling. The schedule varies – sometimes, it will be a normal four-day week (ten hour days) or an eight-day week, Thursday to Thursday, with six days off. Persons applying for this position must be flexible and willing to adjust to this. Projects include riparian planting along salmon inhabited rivers, invasive plant removal. Crewmembers often sport rubber boots, planting sedge plugs for wetland restoration or placing large woody debris in a stream channel. These crews may deploy at any time for a disaster. The duration of these deployments varies from 14-30 days.

October 6th

The Yakima Crew works on a variety of projects, from construction to restoration planting projects. This is a spike crew, meaning travel is required and the schedule may vary - 4 days, 8 days, or, as is the case with emergency response, 30-day deployments. The locations for week-to-week project work is also variable, allowing members on this crew to travel extensively within Washington State.

This crew works with the Washington State Department of Natural Resources on recreation projects throughout the King County I-90 corridor. The crew is based out of North Bend at the DNR maintenance facility. Most of the projects for this year will be located in Tiger Mountain State Forest, but other projects may take place on Rattlesnake Ridge, Raging River State Forest, Little Si, Mount Si, and the Middle Fork of the Snoqualmie River.

Projects range from building brand new multi-use trails, trail bridge construction and other technical trail applications, and maintenance and improvement of existing trails and trailheads. The crew will extensively use and perfect these techniques, utilizing an array of hand tools, cable rigging equipment and power equipment including power wheelbarrows, chainsaws and brush cutters. Applicants must be able to hike long distances and work on steep, uneven terrain in higher elevations with rain, snow, or shine.

Check out theblog of the current crew to see what

Crew work schedule is Mon-Thurs 7:00am - 5:30pm and some Saturdays. We meet in Renton each morning and then travel together to various project sites and farms throughout King County. We plan to install 10 or more new projects throughout the year and maintain up to 50 existing sites. In support of this restoration work, KCD operates a native plant nursery where the crew will spend about a quarter of the time. Duties at the nursery include: potting up young plants, propagating, organizing, weeding, and maintaining the facilities. We then use these nursery plants on our restoration projects. KCD and this crew will plan and lead volunteer events at the nursery and on restoration projects sites, requiring some Saturday workdays. Crew is occasionally deployed to respond to major natural disasters, examples include: Hurricane Sandy, Oso mudslide, ice dam flood in Galena, Alaska, and wildland firefighting.

We look forward to assembling a positive productive crew of 6 to do much needed work for the environment. We also provide plenty of opportunities for training in restoration techniques

The Snohomish county crew works for Snohomish county surface water management located at the county's native plant nursery in Lake Stevens. Our primary focus is salmon habitat restoration. Work is conducted on a combination of public and private lands at various scales ranging from small spawning creeks to large river floodplains.

Work tasks change with each season. Late fall and winter are primarily spent planting native vegetation and managing our native plant nursery. Spring and summer consists of site prep and IPM. Additional summer work may include fish sampling and vegetation monitoring. Throughout the year there are opportunities for a wide variety of field work, including beaver deceiver installation, seed collection, Log installation, and rain gardens.
